

A fixed linear read-out applied per tick

one clip $\rightarrow$ frame-as-tick sequence ($t = 1 \dots T$, $T = 16$ @ 5 fps, Diving)

Deterministic, statically schedulable read-out — no input-dependent control flow

straight-line multiply-accumulate | constant $n_{\text{synch}}(3+C) = 212,992$ MACs / tick (UCF101, $n_{\text{synch}} = 2048$)

replaces dynamic routing

iterative $O(rN_{\text{prim}}C)$ | softmax re-estimated per pass
data-dependent | branch on input
